SUMMARY

DevOps / Cloud Platform Engineer with 4+ years of experience in automating, deploying, and managing scalable infrastructure. Skilled in Kubernetes, Helm, CI/CD (Jenkins, GitLab CI), and Infrastructure as Code (Ansible, Terraform). Spearheaded GitOps adoption (ArgoCD) and built custom integrations to solve complex infrastructure limitations. Proven ability to support and collaborate with 10+ development teams, while also delivering complex technical solutions independently. Currently actively upskilling in AWS, although my cloud experience is recent, I am highly motivated and eager to apply new cloud-native practices. Open to remote opportunities.

EXPERIENCE

DevOps Engineer

Sberbank
06/2024 – 09/2026

- Spearheaded the migration from Ansible-based deployments to GitOps (ArgoCD + Helmfile) across 50+ microservices, reducing Recovery Time Objective (RTO) by 40%.
- Engineered a custom Nginx + Lua proxy to bypass closed-network restrictions, enabling Grafana alert delivery to the corporate messenger and improving MTTD from 15 to 2-3 minutes.
- Automated release notes generation and dynamic image tagging for 70 Docker images under strict security requirements, unblocking weekly business releases.
- Resolved a critical release blocker by diagnosing and fixing a Helm template misconfiguration in a closed repository, enabling a same-day deployment without rebuilding the artifact.
- Refactored CI/CD pipelines in Jenkins, cutting deployment time by 25% and increasing release frequency from 1 to 3 per week.
- Deployed Istio service mesh for advanced traffic management, reducing 5xx errors between services by 30%.
- Optimized host CPU utilization from 85% to 60-65% via HPA and resource limits, achieving ~20% cloud cost savings.
- Managed and automated test environments for 10+ development teams, ensuring 99.9% availability.

DevOps Engineer
PROCOD
02/2022 – 04/2024

- Administered an internal web service (client ticketing system), maintaining 99.5% availability.
- Automated routine operations (database backups, log cleanup) using Bash and Python, reducing manual effort by 40% (~8 hours/week saved).
- Set up API integrations with external systems for data synchronization, decreasing manual data errors by 20%.
- Optimized SQL queries for internal dashboards, improving page load time from 5 to 2 seconds.
- Implemented Zabbix monitoring with proactive alerting, reducing incident detection time from 15 to 5 minutes.
- Containerized the service by migrating it from a physical server to Docker, simplifying deployment and testing.

SKILLS

Containerization & Orchestration: Kubernetes, Docker, Helm, Helmfile, OpenShift
CI/CD & GitOps: Jenkins, GitLab CI, ArgoCD, Azure DevOps
Infrastructure as Code & Automation: Ansible, Terraform, Bash, Python
Monitoring & Observability: Grafana, VictoriaMetrics, ELK Stack, Zabbix, Prometheus
Databases: PostgreSQL, SQL, MongoDB
Web Servers & Networking: Nginx, Apache, Linux Networking, Istio (Service Mesh)
Version Control: Git
Clouds: AWS (actively learning)

EDUCATION

KCHsHT Vocational College
Electrical Equipment Maintenance - Vocational Degree
09/2015 – 06/2019

LANGUAGES

English - B2
Russian - Native
Armenian - A1

ABOUT

I am highly motivated by complex engineering challenges and constantly push myself to grow. I enjoy working both as part of a large cross-functional team and taking full ownership of deep, independent tasks. I don't just write YAML - I genuinely love finding elegant technical solutions to hard problems. Currently diving deep into AWS to expand my cloud skills.
